

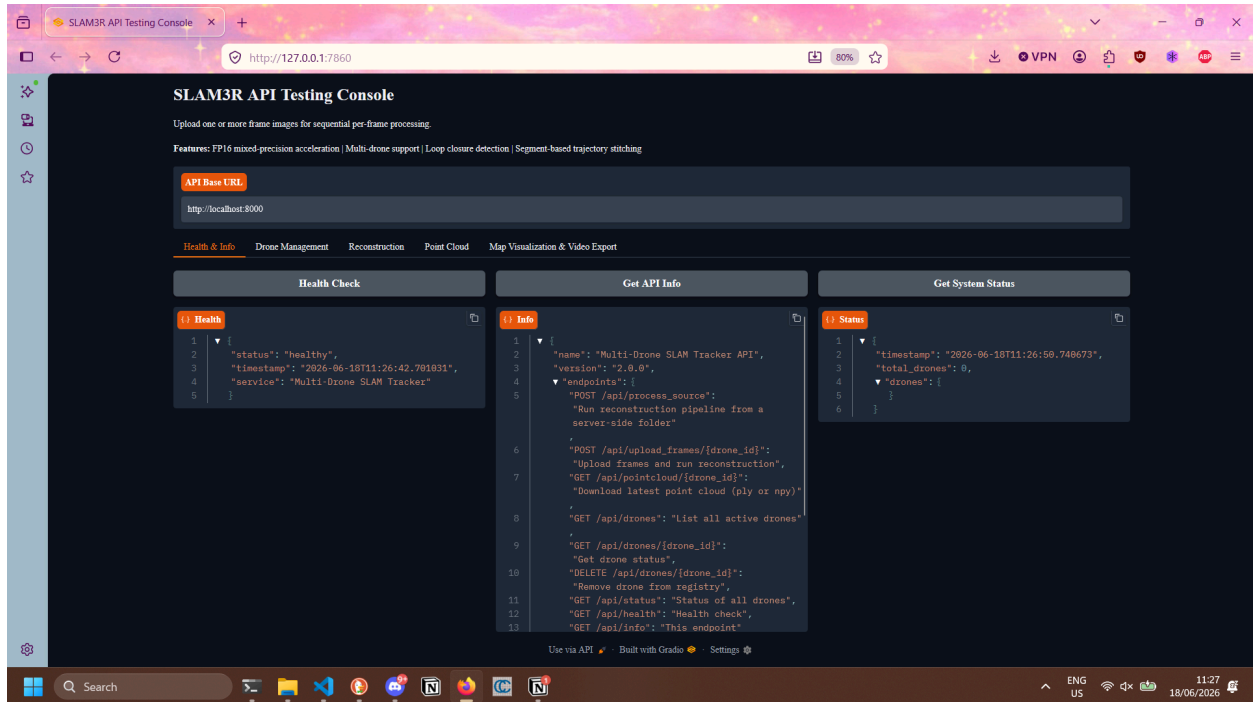

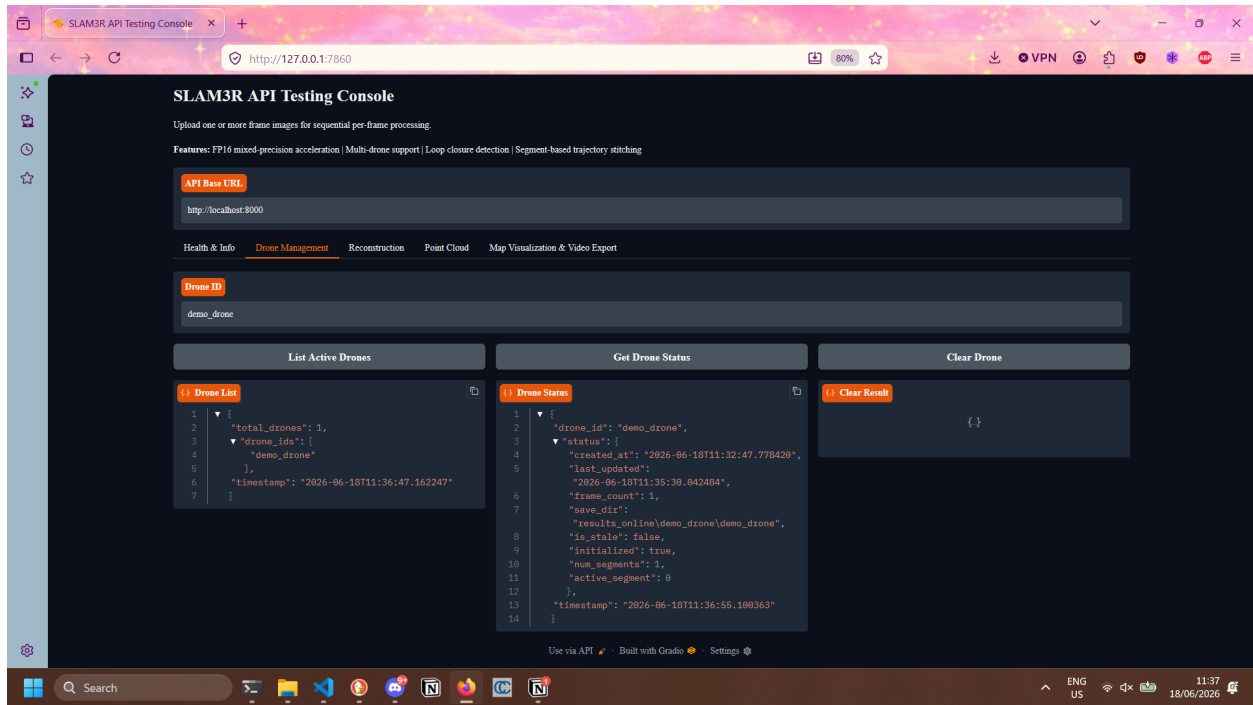

Mapping UI guide

Healt & Info

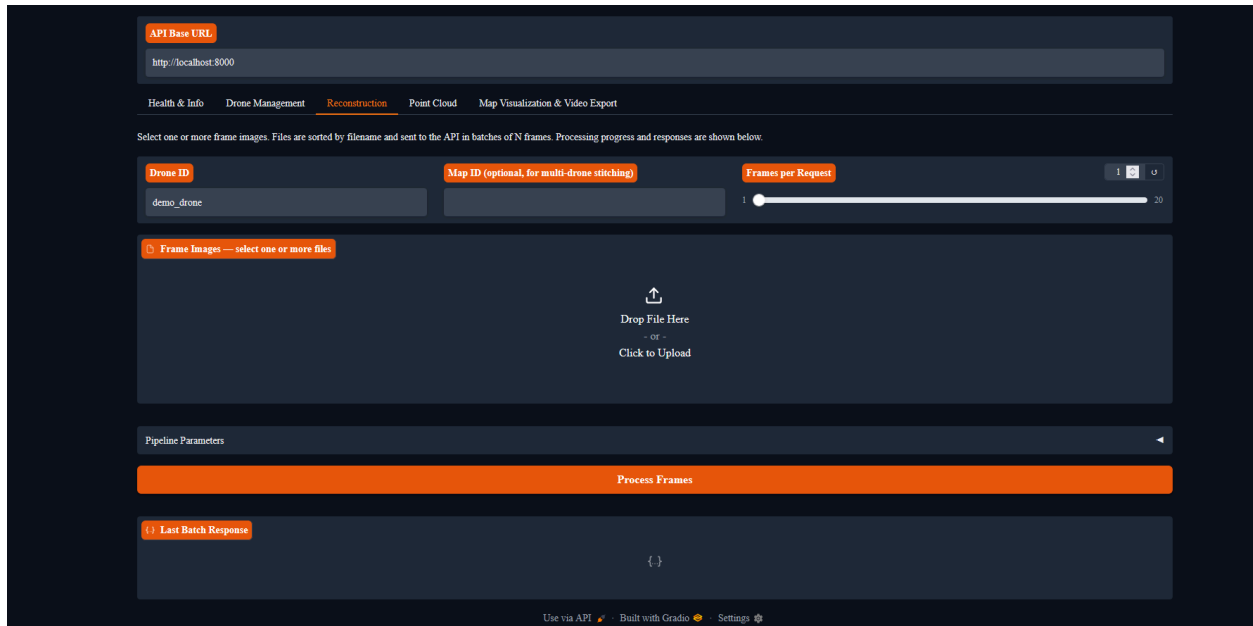

- Includes healthchecks and docs

Drone GET/DELETE

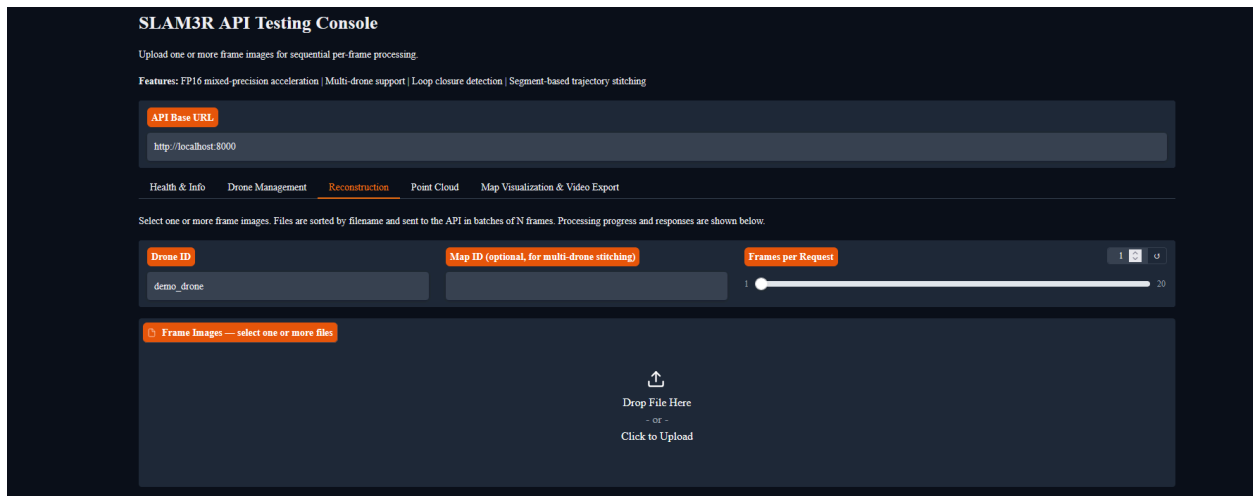

- Listing all drones
- Getting one drone info
- Deleting drone info and map

Reconstruction

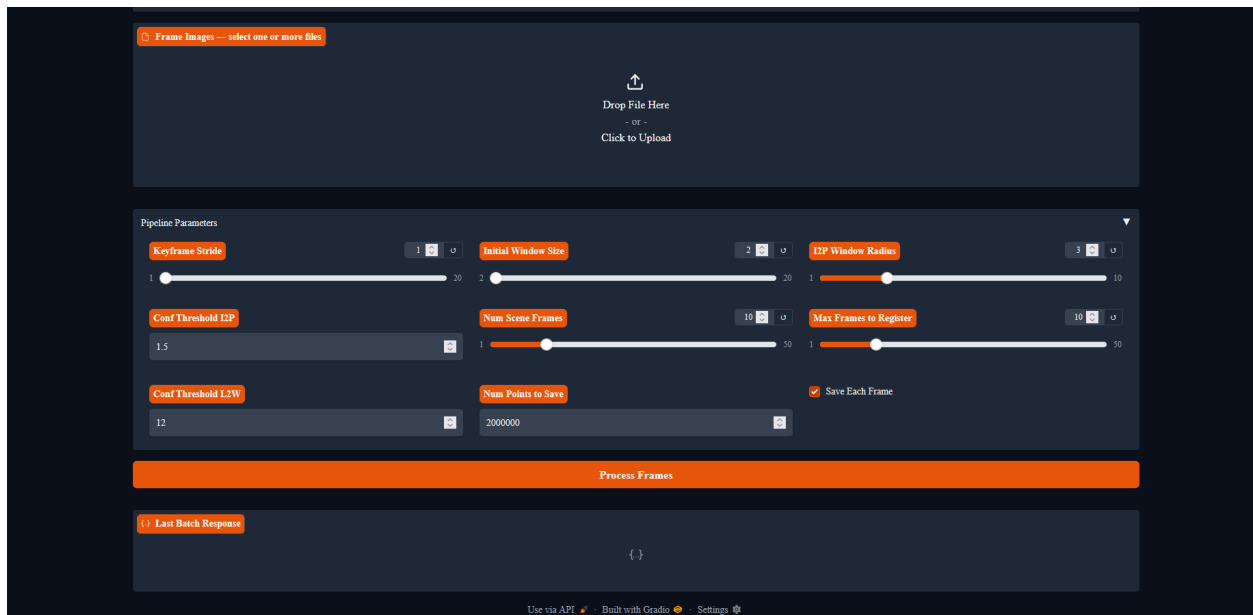

- Upload images, named sequentially.
- Name drone and, optionally, map.
- Process frames.

Images upload + drone naming

Processing parameters

- **Keyframe Stride:** use every N step for mapping, skip others.
- **Initial Window Size:** how many frames to collect before merging the map for the first time.
- **I2P Window Radius:** How many last frames to use for position estimation after I2P.
- **Num Scene Frames:** How many frames are kept active for loop detection.
- **Max Frames to Register:** Max sample size for loop detection.

Processing results per-frame
